# Flex static code analysis

Unique rules to find Bugs, Security Hotspots, and Code Smells in your FLEX code

All rules 76 Vulnerability 5 Bug 9 Security Hotspot 1 Code Smell 61

Tags

Search by name...

Security.allowDomain(...) should only be used in a tightly focused manner

Vulnerability

The flash.system.Security.exactSettings property should never be set to false

Vulnerability

Dynamic classes should not be used

Code Smell

"LocalConnection" should be configured to narrowly specify the domains with which local connections to other Flex application are allowed

Vulnerability

"default" clauses should be first or last

Code Smell

Event types should be defined in metadata tags

Code Smell

Event names should not be hardcoded in event listeners

Code Smell

The special "star" type should not be used

Code Smell

Variables of the "Object" type should not be used

Code Smell

Methods should not be empty

Code Smell

Constant names should comply with a naming convention

Code Smell

All branches in a conditional structure should not have exactly the same implementation

Bug

Classes that extend "Event" should

Statements, operators and keywords specific to ActionScript 2 should not be used

Analyze your code

Code Smell Major obsolete

Usage of statements, operators and keywords specific to ActionScript 2 does not allow to migrate to ActionScript 3. This includes "intrinsic" keyword, set variable statement and following list of operators:

- <> (inequality) - use != instead
- add (concatenation (strings)) - use + instead
- eq (equality (strings)) - use == instead
- ne (not equal (strings)) - use != instead
- lt (less than (strings)) - use < instead
- le (less than or equal to (strings)) - use <= instead
- gt (greater than (strings)) - use > instead
- ge (greater than or equal to (strings)) - use >= instead
- and (logical and) - use && instead
- or (logical or) - use || instead
- not (logical not) - use ! instead

Noncompliant Code Example

```
if (true != false) { // Compliant
}

if (true <> false) { // Noncompliant
}

set("varName", value); // Noncompliant
varName = value; // Compliant
```
