# Flex static code analysis

Unique rules to find Bugs, Security Hotspots, and Code Smells in your FLEX code

- All rules 76
-  Vulnerability 5
-  Bug 9
-  Security Hotspot 1
-  Code Smell 61

Tags

Search by name...

Security.allowDomain(...) should only be used in a tightly focused manner

 Vulnerability

The flash.system.Security.exactSettings property should never be set to false

 Vulnerability

Dynamic classes should not be used

 Code Smell

"LocalConnection" should be configured to narrowly specify the domains with which local connections to other Flex application are allowed

 Vulnerability

"default" clauses should be first or last

 Code Smell

Event types should be defined in metadata tags

 Code Smell

Event names should not be hardcoded in event listeners

 Code Smell

The special "star" type should not be used

 Code Smell

Variables of the "Object" type should not be used

 Code Smell

Methods should not be empty

 Code Smell

Constant names should comply with a naming convention

 Code Smell

All branches in a conditional structure should not have exactly the same implementation

 Bug

Classes that extend "Event" should

Only "while", "do" and "for" statements should be labelled

Analyze your code

 Code Smell  Major   pitfall

Any statement or block of statements can be identified by a label, but those labels should be used only on while, do-while and for statements. Using labels in any other context leads to unstructured, confusing code.

### Noncompliant Code Example

```
myLabel:if (i % 2 == 0) { // Noncompliant
    if (i == 12) {
        print("12");
        break myLabel;
    }
    print("Odd number, but not 12");
}
```

### Compliant Solution

```
myLabel:for (i = 0; i < 10; i++) { // Compliant
    print("Loop");
    break myLabel;
}
```
