Flex static code analysis

Unique rules to find Bugs, Security Hotspots, and Code Smells in your FLEX code

- All rules 76
-  Vulnerability 5
-  Bug 9
-  Security Hotspot 1
-  Code Smell 61

Tags ▾

Search by name... 

Security.allowDomain(...) should only be used in a tightly focused manner		Vulnerability
The flash.system.Security.exactSettings property should never be set to false		Vulnerability
Dynamic classes should not be used		Code Smell
"LocalConnection" should be configured to narrowly specify the domains with which local connections to other Flex application are allowed		Vulnerability
"default" clauses should be first or last		Code Smell
Event types should be defined in metadata tags		Code Smell
Event names should not be hardcoded in event listeners		Code Smell
The special "star" type should not be used		Code Smell
Variables of the "Object" type should not be used		Code Smell
Methods should not be empty		Code Smell
Constant names should comply with a naming convention		Code Smell
All branches in a conditional structure should not have exactly the same implementation		Bug
Classes that extend "Event" should		

"Alert.show(...)" should not be used

Analyze your code

 Vulnerability  Minor 

`Alert.show(...)` can be useful for debugging during development, but in production mode this kind of pop-up could expose sensitive information to attackers, and should never be displayed.

Noncompliant Code Example

```
if (unexpectedCondition)
{
    Alert.show("Unexpected Condition");
}
```
