Unique rules to find Bugs, Security Hotspots, and Code Smells in your HTML code

All rules (65) **R** Bug (24) Security Hotspot (3)

Code Smell (38)

Tags

<script>...</script> elements

should not be nested

character sequence.

Analyze your code

Search by name...

Table cells should reference their headers

Rug Bug

Tables used for layout should not include semantic markup

📆 Bug

Tables should have headers

🖷 Bug

"<html>" element should have a language attribute

👬 Bug

<script>...</script> elements should not be nested

📆 Bug

"" tags should have "id" or "scope" attributes

📆 Bug

"<title>" should be present in all pages

📆 Bug

"<!DOCTYPE>" declarations should appear before "<html>" tags

📆 Bug

Elements deprecated in HTML5 should not be used

📆 Bug

HTML "" should not be used for layout purposes

Code Smell

"aria-label" or "aria-labelledby" attributes should be used to differentiate similar elements

Code Smell

Videos should have subtitles

Code Smell

🙀 Bug 🔷 Major 🕝 When parsing a script node, the browser treats its contents as plain text, and

immediately finishes parsing when it finds the first closing </script>

As a consequence, nested script nodes are not possible, because all opening <script> tags found along the way are ignored.

Web browsers doesn't support nested <script>...</script> elements. But there is no error in such case and browsers just close the first encountered <script> tag as soon as a closing </script> tag is found along the way. So there is a big chance to display something totally unexpected to the end-users.

Noncompliant Code Example

```
<script type="text/template">
  <div>
    Hello!
  </div>
  <script type="text/javascript"> <!-- Noncompliant -->
   alert("Hi!");
  </script>
</script>
```

Compliant Solution

```
<script type="text/javascript">
  alert("Hi!");
</script>
<script type="text/template">
   <div>
    Hello!
   </div>
</script>
Available In:
```
