Code Smell 61

Flex static code analysis

Unique rules to find Bugs, Security Hotspots, and Code Smells in your FLEX code

9

Security Hotspot (1)

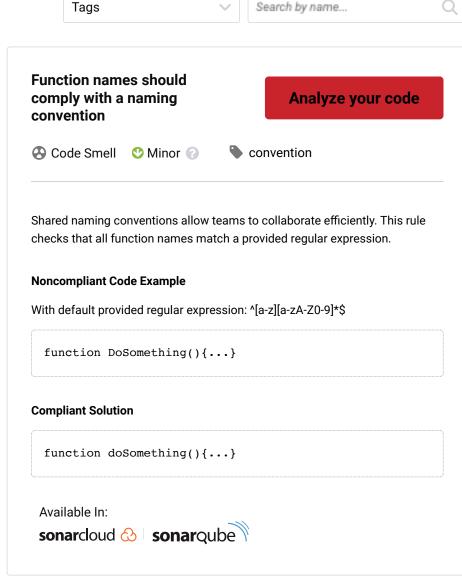

Security.allowDomain() should only be used in a tightly focused manner	
The flash.system.Security.exactSettings property should never be set to false	
Dynamic classes should not be used Code Smell	
"LocalConnection" should be configured to narrowly specify the domains with which local connections to other Flex application are allowed	
"default" clauses should be first or last	
Code Smell	
Event types should be defined in metadata tags	
☼ Code Smell	
Event names should not be hardcoded in event listeners	
☼ Code Smell	
The special "star" type should not be used	
☼ Code Smell	
Variables of the "Object" type should not be used	
☼ Code Smell	
Methods should not be empty Code Smell	
3 Sout Sincil	
Constant names should comply with a naming convention	
Code Smell	

should not have exactly the same

Classes that extend "Event" should

implementation

📆 Bug

override "Event.clone()" • Bug
Constructors should not dispatch events
Rug
"ManagedEvents" tags should have companion "Event" tags
₩ Bug
Objects should not be instantiated inside a loop
Two branches in a conditional structure should not have exactly the same implementation
Constructor bodies should be as lightweight as possible
Only "while", "do" and "for" statements should be labelled
Statements, operators and keywords specific to ActionScript 2 should not be used
"for" loop stop conditions should be invariant
Unused function parameters should be removed
